# DAIKIN

WIRED REMOTE CONTROLLER

INSTALLATION MANUAL

BRC2E52C7

BRC3E52C7

Be sure to read this installation manual before conducting the installation of this product.

Contents

1. Safety Precautions

The original instructions are written in English. All other languages are translations of the original instructions.

■ **Also see the installation manual attached to the indoor unit.**

Please read these Safety Precautions carefully before installing the remote controller.

● This manual classifies the precautions into WARNING and CAUTION. They both contain important information regarding safety. Be sure to follow all the precautions below.

⚠ **WARNING**	Failure to follow these instructions properly may result in personal injury or loss of life.
⚠ **CAUTION**	Failure to observe these instructions properly may result in property damage or personal injury, which may be serious depending on the circumstances.

● After completing the installation, conduct a trial operation to check for faults and explain to the customer how to operate the air conditioner with the aid of the operation manual. Ask the customer to store the installation manual along with the operation manual for future reference.

⚠ **WARNING**
Ask your dealer or qualified personnel to carry out installation work. Do not attempt to install the remote controller yourself. Improper installation may result in water leakage, electric shocks or fire.
Consult your local dealer regarding relocation and reinstallation of the remote controller. Improper installation work may result in leakage, electric shocks or fire hazards.
Install the remote controller in accordance with the instructions in this installation manual. Improper installation may result in water leakage, electric shocks or fire.
Be sure to use only the specified accessories and parts for installation work. Failure to use the specified parts may result in the unit falling down, water leakage, electric shocks or fire.
Install the remote controller on a foundation strong enough to withstand the weight of the remote controller. Insufficient strength may result in the remote controller falling down and causing injury.
Electrical work must be performed in accordance with the relevant local and national regulations and with the instructions in this installation manual. Be sure to use a dedicated power supply circuit only. Insufficient power circuit capacity and improper workmanship may result in electric shocks or fire.
Always perform installation work with the power turned off. Touching electric parts may result in electric shock.
Do not disassemble, reconstruct or repair. This may result in electric shock and/or fire.
Make sure that all wiring is secured, the specified wires are used and that there is no strain on the terminal connections or wires. Improper connections or securing of wires may result in abnormal heat build-up or fire.
The choice of materials and installations must comply with the applicable national and international standards.

⚠ CAUTION

| |
|---|
| To avoid leakage and electric shock due to entry of water or insects, fill the wiring through hole with putty. |
| To avoid electric shocks, do not operate with wet hands. |
| Do not wash the remote controller with water, as this may result in electric shocks or fire. |
| Install the indoor and outdoor units, power cord and connection wires at least 1 meter away from televisions or radios to prevent interference and noise.
(Depending on the incoming signal strength, a distance of 1 meter may not be sufficient to eliminate noise.) |
| Do not install the air conditioner in the following locations:
  1. Where there is a high concentration of mineral oil spray or vapour (e.g. a kitchen).
     Plastic parts may deteriorate and fall off which could result in water leakage.
  2. Where corrosive gas, such as sulphurous acid gas, is produced.
     Corroding of copper pipes or soldered parts may result in refrigerant leakage.
  3. Near machinery emitting electromagnetic radiation.
     Electromagnetic radiation may disturb the operation of the control system and result in malfunctioning of the unit.
  4. Where flammable gas may leak, where there is carbon fibre or ignitable dust suspensions in the air or where volatile flammables such as paint thinner or gasoline are handled.
     Operating the unit in such conditions may result in fire.
  5. High temperature areas or direct flames.
     Overheating and/or fire may occur.
  6. Moist areas or places which may be exposed to water.
     If water enters the remote controller, electric shock may be caused and the inner electronics may fail. |
| When the thermostat function of the remote controller is used, select the installation location while considering it should be a place:
● Where the average temperature in the room can be detected.
● Which is not exposed to direct sunlight.
● Which is not near a heat source.
● Which is not affected by the outside air or air draught due to, for example, opening/closing of doors, the air outlet of the indoor unit or the like. |

2. Accessories

The following accessories are included.

Wood screw + wall plugs (Ø3.5×16)	Small screw (M4×16)	Clamp	Wiring retainer
2x	2x	1x	1x

3. Remote controller installation procedure

3-1 Determine where to install the remote controller.

Make sure to follow "1. Safety Precautions" when determining the location.

3-2 Make a wiring through hole on the wall if the wires are coming out from the rear.

External view of the remote controller

Ø8-10

Set the center of the wall hole to the center of the wiring through hole on the controller lower case when making the hole.

Lower case
Through hole

40

48.5

Through hole
Ø8-10

⚠ **CAUTION**

If the hole size is too large or the location is not proper, the hole may come out from the controller.

3-3 Determine the direction of the controller wiring outlet (rear outlet, left outlet, top left outlet, top center outlet).

3-3-1 Rear outlet
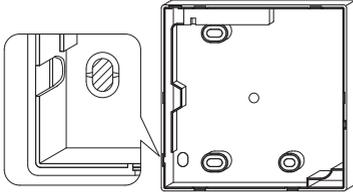

Cut off the resin area (hatched area).
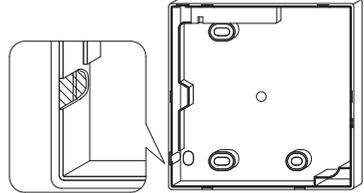

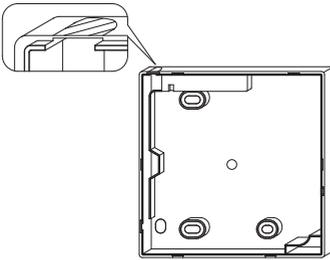

3-3-2 Left outlet

Cut off the thin area (hatched area) with nippers or the like and then remove the burrs with a file or the like.

3-3-3 Top left outlet

Cut off the thin area (hatched area) with nippers or the like and then remove the burrs with a file or the like.

3-3-4 Top center outlet
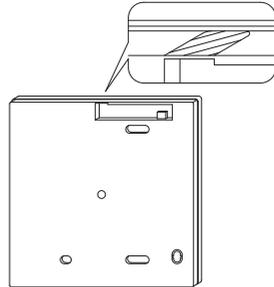

Cut off the thin area (hatched area) with nippers or the like and then remove the burrs with a file or the like.

3-4 Conduct wiring.

⚠ **CAUTION**

1. The switchbox and the transmission wiring should not be attached.
2. Do not directly touch the remote controller PCB.

Wiring Specifications

Wiring Type	Sheathed vinyl cord or cable
Wiring Size	0.75~1.25 mm²
Wiring Length	Max. 500 m[*]

*This is the total length in the system when using group control.

The sheath part in the remote controller case should be stripped following these instructions.

±10 mm

Peel the shield and sheath

For easy wiring, it is better to keep ±10 mm difference between the length of the two wires.

Cutting guideline
of the wiring

Sheath stripping length:
● ±150 mm for top left outlet
● ±200 mm for top center outlet

Connect the terminals (P/P1, N/P2) of the remote controller to the terminals (P1, P2) of the indoor unit. (P1 and P2 have no polarities.)

⚠ **CAUTION**

- Do not perform wiring close to a power line in order to avoid electrical noise (external noise).
- Seal the wiring draw-in port securely with putty (field supply) to prevent the entry of insects or the like.

3-5 Fixing procedure of the lower case.

In the case of wiring a remote controller through the top center outlet or rear outlet, perform the wiring through the outlet hole in the lower case before it is installed on the wall.

3-5-1 Wall mounting

Secure by using the attached wood screws (2×).

Wood screws (Ø3.5×16)

Small screws (M4×16)
⚠ CAUTION

● Select a flat surface for installation if possible.
● Do not tighten the installation screws too much to avoid deforming the lower case.

3-6 Attach the upper case.

● Align the upper case with the tabs of the lower case (6 points) and insert the upper case.
● Be careful not to pinch the wiring when attaching.
● Peel off the protective seal which is attached to the upper case.
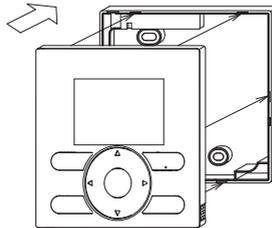

3-7 Remove the upper case.

Insert a slot screwdriver into the slots in the lower case (2 places) to remove the upper case.

NOTE

● The remote controller PCB is installed on the upper case. Be careful not to damage the PCB with the slot screwdriver.
● Take care that dust or moisture does not touch the PCB of the removed upper case.

*Available menu items are depending on the connected model.

(4) Up button ▲
  - Used to raise the set temperature.
  - The next item on the upper side will be highlighted.
    (Keep pressing the button to cycle through the values or items.)
  - Used to change the selected item.

(5) Down button ▼
- Used to lower the set temperature.
- The next item on the lower side will be highlighted.
(Keep pressing the button to cycle through the values or items.)
- Used to change the selected item.

(6) Right button ▶
- Used to highlight the next item on the right-hand side.
- The display contents are changed to the next screen.

(7) Left button ◀
- Used to highlight the next items on the left-hand side.
- The display contents are changed to the previous screen.

(8) On/Off button
- Press to start or stop the air conditioner.

(9) Operation lamp (Green)
- This lamp lights up during operation.
- This lamp will blink if an error occurs.
- This lamp is not lit when the unit operation is OFF.

(10) Cancel button
- This button is disabled by default. To enable, refer to "4-2 Enable/disable the Menu/Enter and Cancel button" on page 12.
- Used to return to the previous screen.
- Press and hold this button for 4 seconds or longer to display the Service Settings menu.

(11) LCD (with backlight)
- The backlight will be lit for approximately 30 seconds when one of the buttons is pressed.
- The actions linked to the buttons, except for the On/Off button, are not carried out when the backlight is not lit.
- When two remote controllers are used to control a single indoor unit, the backlight of the remote controller which is operated first will be lit.

*Available menu items are depending on the connected model.

⚠ **CAUTION**

- To operate the Up/Down/Left/Right button, always press ▲, ▼, ◀, or ▶.
- The Menu/Enter and the Cancel button are disabled by default.
To enable, refer to "4-2 Enable/disable the Menu/Enter and Cancel button" on page 12.
- The Menu/Enter and Cancel button need to be disabled again after changes are made.
- For the BRC3E, the Operation Mode Selector button is locked by default.
To unlock, refer to "13. Prohibit Buttons" on page 28.
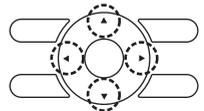

4-2 Enable/disable the Menu/Enter and Cancel button

To enable the Menu/Enter and Cancel button in the Basic screen, proceed as follow:

12. Keep the ▶ button pressed.
13. Push the 3 indicated keys simultaneously while keeping the ▶ button pressed.

To disable the Menu/Enter and Cancel button in the Basic screen, follow the same procedure.

4-3 Description of button operation

<Service Settings>

Highlighted display (selected items)

Instructions for manipulating the buttons will appear.
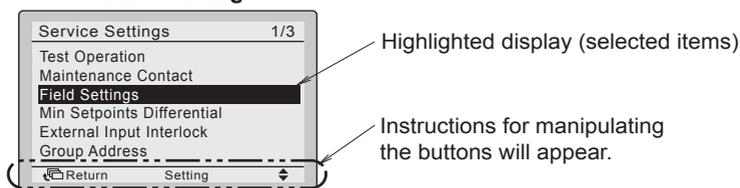

5. Power-on

> ⚠ **CAUTION**
>
> ● It is not possible to use two remote controllers and the Digital Input Adapter BRP7A* together. The Digital Input Adapter will not work and will be in an error state when a sub remote controller is detected.
>
> ● When controlling one indoor unit with two remote controllers, one remote controller needs to be set as the main remote controller and one as the sub remote controller.
> This selection needs to be made once during start up and can be changed afterwards in the Service Settings menu.

● Check that the indoor/outdoor unit wiring is completed.

● Check that the switchbox cover of the indoor and outdoor units are closed before powering on.

If one indoor unit is controlled by a remote controller

5-1 Turn on the power.

5-2 "Checking the connection. Please stand by." is displayed.

<Main remote controller>

SECOND CODE NO.
FIRST CODE (SW) NO.

6-5 In the case of configuring the indoor units individually during group control (When Mode No. such as 20, 21, 22, 23, 25 are selected), highlight the unit No. and select the "Indoor unit Number" to be set by using the ▲ ▼ (Up/Down) buttons. (In the case of configuring as a group, this operation is not needed.)

NOTE

- In the case of individual configuration per indoor unit, the current settings are displayed.
- SECOND CODE NO. " - " means that there is no function available
- In the case of configuring as a group, all SECOND CODE NO. which may be set are displayed as " * ".

6-6 Highlight the SECOND CODE NO. of the FIRST CODE NO. to be changed and select the desired SECOND CODE NO. by using the ▲▼ (Up/Down) buttons. Multiple identical mode number settings are available.

6-7 Press the Menu/Enter button. The confirmation screen is displayed.

**6-8** Select Yes and press the Menu/Enter button. The settings are saved and the Field settings screen returns.

Press the Menu/Enter button.

Press the Menu/Enter button.

<Field Settings>

6-9 When multiple settings need to be changed, repeat "6-3" to "6-8".

6-10 After all changes are completed, press the Cancel button twice.

6-11 The backlight goes out and "Checking the connection. Please stand by" is displayed during initialization. After the initialization, the Basic screen returns.

6-12 Disable the Menu/Enter and Cancel button when no other settings need to be changed. To disable, refer to "4-2 Enable/ disable the Menu/Enter and Cancel button" on page 12.

⚠ **CAUTION**

- When an optional accessory is installed on the indoor unit, the settings of the indoor unit may be changed. See the manual of the optional accessory.
- For the details on the field settings of the indoor unit, see the installation manual attached to the indoor unit.
- The outdoor unit field settings can only be configured on the outdoor PCB. Refer to the installation manual attached to the outdoor unit.

NOTE

● Though the configuration is performed for the whole group, set the Mode No. in parenthesis when performing an individual configuration per indoor unit or when checking after the configuration is finished.

● The SECOND CODE NO. at factory shipment depends on the indoor unit model. Default values can be found in the respective Service Manual of the respective units.
  For the following settings, the value is the same for all indoor units.
  - Thermostat sensor used for the "Auto" operation mode and the Setback function (room temperature on detailed display):"02".
  - Setback function: "04"
  - External input B1: "02"
  - External input B2: "02"

● Functions which are unavailable for the connected indoor unit(s) are not displayed.

7. Test operation method (SkyAir only)

∗ In the case of VRV, see the manual attached to the outdoor unit.

> **Also see the installation manuals attached to the indoor unit and the outdoor unit.**

- Check that the wiring of the indoor unit and the outdoor unit is completed.
- Check that the switchbox cover of the indoor unit and the outdoor unit is closed.
- After refrigerant piping, drain piping and electric wiring are completed, clean the inside of the indoor unit and the decorative panel.
- Perform the test operation according to the following procedure.

┌─ **NOTE** ───
- The backlight will be lit for approximately 30 seconds when pressing one of the operation buttons.
- Operate the buttons only when the backlight is lit. However, the On/Off button can be operated when the backlight is not lit.
└──

7-1 Make sure to turn on the power at least 6 hours before starting test operation to protect the compressor.

┌─ ⚠ **CAUTION** ─────────
Make sure that the outer panel and piping cover are closed before operation (danger of electric shock).
└──────────────────────────

7-2 Confirm that both the liquid and gas stop valves are opened.

┌─ **NOTE** ───
After the air purge of the vacuum pump, the refrigerant pressure may not rise even though the stop valve is opened. The reason is that the refrigerant system of the outdoor unit is blocked by the electrical expansion valve or the like. Operation is no problem.
└──

7-3 Set the operation mode to cooling by using the Operation Mode Selector button.

7-4 Enable the Menu/Enter and Cancel button. To enable, refer to "4-2 Enable/disable the Menu/Enter and Cancel button" on page 12.

7-5 Press and hold the Cancel button for 4 seconds or longer. The Service Settings menu is displayed.

7-13   Check the functions according to the operation manual.

7-14   When the decoration panel is not installed, turn off the power after test operation finishes.

NOTE

Test operation will automatically finish after 30 minutes.

⚠ **CAUTION**

● If the interior work is not completed when the test operation is finished, explain to the customer that he should not operate the unit until the interior work is completed in order to protect the indoor unit.

● (If the indoor unit is operated, the indoor unit may be contaminated with the materials which arise from paints or adhesives during the interior work and water splash or water leak may occur.)

⚠ **CAUTION**

● If it is not possible to operate the unit due to any malfunction, refer to Malfunction diagnosis method .

● When the test operation finishes, check that the error code history is not displayed in the Maintenance Information screen according to the following procedure.

<Basic screen>

7-15   Press the Menu/Enter button in the Basic screen. The Main menu is displayed.

Press and hold the On/Off button for 4 seconds or longer.

NOTE

If no error code is displayed when this procedure is followed, the system has completed the test operation normally.

Malfunction diagnosis method

● When the remote controller displays any item in the following table, inspect the details in the table.
● If an error occurs, "⚠" is displayed. Conduct the malfunction analysis referring to "Error code list" in the installation manual of the indoor unit. When the unit No. which detected the error during group control is confirmed, refer to "8. Checking procedure of Error History".

28°C

Remote controller display	Description
No display	• Power outage, power voltage failure or open-phase • Wrong wiring (between indoor and outdoor units) • Indoor PCB assembly failure • Remote controller wiring disconnection • Remote controller failure • Blown fuse (outdoor unit)
Display "Checking the connection Please stand by" is shown.∗	• Indoor PCB assembly failure • Wrong wiring (between indoor and outdoor units)

∗ Though "Checking the connection Please stand by" is displayed for up to 90 seconds after powering on, this does not mean there is a failure. (Determine after 90 seconds.)

8. Checking procedure of Error History

8-1 Enable the Menu/Enter button.
To enable, refer to "4-2 Enable/disable the Menu/Enter and Cancel button" on page 12.

8-2 Press and hold the Cancel button for 4 seconds or longer in the Basic screen. The Service Settings menu is displayed.

<Basic screen>

8-2

16. External Input Interlock Function

NOTE

- Only available when the optional BRP7A51 Digital Input Adapter is connected.
- In case there are communication problems or the adapter is not working correctly, the External Input Interlock menu will not be visible in the Service Settings menu.
- When a second remote controller is connected, it is not possible to use the BRP7A51 Digital Input Adapter.
- When a BRP7A51 Digital Input Adapter is connected, the schedule function will be disabled as long as the BRP7A51 Digital Input Adapter is connected.
  Note that the schedule function will be disabled when the BRP7A51 Digital Input Adapter is connected. For more information about the schedule functionality, refer to the operation manual.
- When a centralized controller is connected, the External Input Interlock function can be overruled by the centralized controller. The centralized controller has priority and works like there was no BRP7A51 Digital Input Adapter connected.

- Please make sure that the BRP7A51 Digital Input Adapter and the optional contacts (window contact and key card contact) are correctly installed. Don't forget to confirm that the "No Volt" contact on the BRP7151 Digital Input Adapter PCB is in the correct position.
- For installation and connection of the BRP7A51 Digital Input Adapter refer to the corresponding installation manual.

<Service Settings>

Parameter	Explanation	Possible values	Default value
B2 Delay Timer	Timer that starts after removing the Key Card. As long as this timer does not expire, the unit continues to operate normally.	0 - 10 minutes	"1 min"
B2 Reset Timer	Timer that starts when Delay Timer has expired. When this timer expires, the previous state changes to the "Default Reset Setting" state.	0 – 20 hours	"20 hrs"
Reset On/Off	"Default Reset Setting" On/Off state.	"ON", "OFF", "--"	"OFF"
Reset Mode	"Default Reset Setting" operation mode.	"Auto", "Cool", "Heat", "Fan", "--"	"--"
Reset Cool SP	"Default Reset Setting" cooling setpoint.	See indoor unit's setpoint range and setpoint range limitation, "--".	"22°C"
Reset Heat SP	"Default Reset Setting" heating setpoint.	See indoor unit's setpoint range and setpoint range limitation, "--".	"22°C"

NOTE

● When a parameter is "--", this means that nothing will be changed for this parameter and the current active value is kept.

Window contact logic:

Window contact B1	Key Card contact B2	Time	Action
Closed	Closed	/	• The unit is operating normally. • The unit returns to the previous state before opening the contact.
Open	Closed	/	The unit is forced off (operation off): • No delay and reset timer functionality. • No setback functionality. • Not possible to turn the unit ON with the On/Off button.

Key Card contact logic:

Window contact B1	Key Card contact B2	Time	Action
Closed	Closed	• / • Delay timer < Time < Reset timer • Time > Reset timer	• The unit is operating normally. • The unit returns to the previous state before opening the contact if the reset timer has not expired. • The unit returns to the "Default Reset Setting" state (menu setting) if the reset timer has expired.
Closed	Open	Time < Delay timer	The unit is operating normally.
Closed	Open	Time > Delay timer	The unit is forced off (operation off): • Depending on whether the setback functionality is enabled, setback will work or not. • Not possible to turn the unit ON with the On/Off button. • The Reset timer starts counting after the Delay timer has expired.

NOTE

● The previous state consists of On/Off state, Operation mode, cooling and heating setpoint.
● The fan speed and the setback cooling and heating setpoint can be changed at any time without losing the changes when using the contacts.
● The fan speed is stored for the two main operation modes independantly. Heating only has its own saved fan speed and Cooling only, Dry and Fan only have their own fan speed.
● Changes made while the Key Card contact is open and the delay timer has not expired (normal operation) are not saved when closing the contact again.

Combination of window and key card contact logic:
● The window contact has priority over the delay timer and the setback functionality of the key card contact:
  When the window contact is opened while the key card contact is open, the delay timer will immediately expire if it is still running and setback will not work anymore. The reset timer will immediately start counting or will not reset when it was already running.
● The reset timer functionality of the key card contact has priority over the window contact when returning to the previous state:
  When the key card contact is opened while the window contact is open, the delay timer will start running. When the delay timer expires the reset timer will start running. When the reset timer expires, the previous state is updated to the "Default Reset Setting" state.
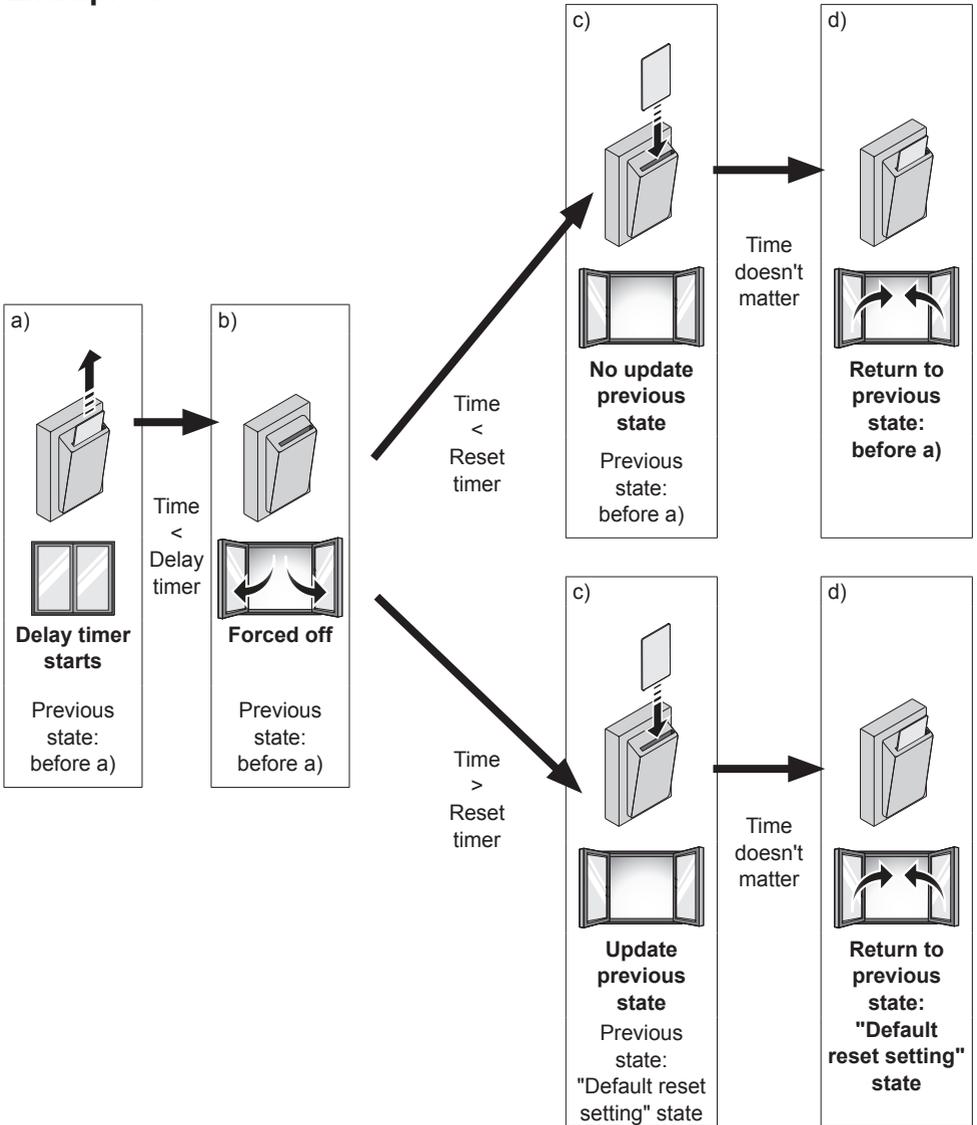

Example 1 (See "Example 1" on page 37)

a) Remove the key card, the unit continues to work normally until the delay timer has expired.
b) Open the window before delay timer expires, the unit stops immediately. It is not possible to turn the unit on or off, the setback functionality does not work, the delay timer stops counting and the reset timer starts counting.
c) Insert the key card, only an update of the previous state happens. The unit is forced off and the setback functionality is still disabled (see window contact logic):
  ● If the reset timer has not expired before inserting the key card, the previous state is the same as the original state because there was only a change to the forced off state.
  ● If the reset timer has expired before inserting the key card, the previous state is the "Default Reset Setting" state.
d) Close the window, the unit reverts to the previous state. The previous state is depending on the expiration of the reset timer.
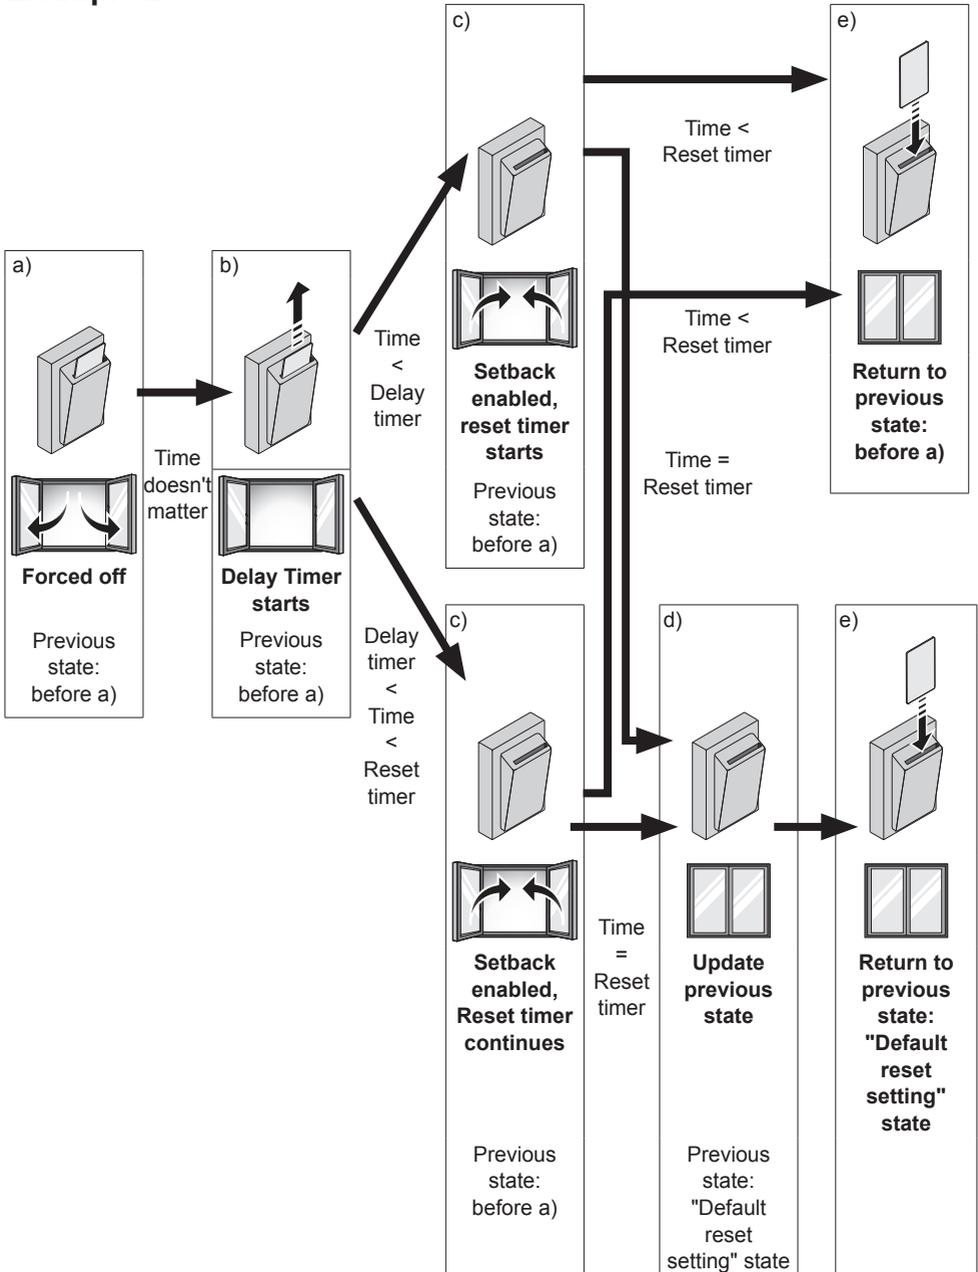

Example 2 (See "Example 2" on page 38)

a) Open the window, the unit stops immediately. The unit cannot be turned on with the On/Off button, the setback functionality does not work and the delay timer does not start counting.
b) Remove the key card. The delay timer starts counting.
c) Close the window. The state is the same as if the window was never opened (setback will work if enabled).
  ● If the delay timer expires before closing the window, the reset timer starts counting. Closing the window has no influence on the reset timer.
  ● If the delay timer has not expired before closing the window, the delay timer will expire immediately and the reset timer starts counting.
d) When the reset timer expires, the previous state is updated to the "Default Reset Setting" state.
e) Insert key card.
  ● If the reset timer has not expired before inserting the key card, the unit returns to the state before the window was opened (last on state).
  ● If the reset timer has expired before inserting the key card, the unit goes to the "Default Reset Setting" state.

Example 1

a)

Delay timer starts

Previous state: before a)

Time < Delay timer

b)

Forced off

Previous state: before a)

Time < Reset timer

c)

No update previous state

Previous state: before a)

Time doesn't matter

d)

Return to previous state: before a)

Time > Reset timer

c)

Update previous state

Previous state: "Default reset setting" state

Time doesn't matter

d)

Return to previous state: "Default reset setting" state

Example 2

17. Single and Dual setpoint mode

NOTE

- When a centralized controller is connected, the remote controller is forced to single setpoint mode. It is not possible to change to dual setpoint mode.

- Switch between Single setpoint mode and Dual setpoint mode
- Single setpoint mode is set by selecting "Single SP"
- Dual setpoint mode is set by selecting "0°C" – "8°C"

17-1 Enable the Menu/Enter and Cancel button. To enable, refer to .

17-2 Press and hold the Cancel button for 4 seconds or longer. The Service Settings menu is displayed.

**<Basic screen>**

17-2

28°C
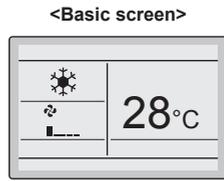

Press and hold the Cancel button for 4 seconds or longer while the backlight is lit.

<Service Settings>

17-3 Select Min Setpoints Differential and press the Menu/Enter button. The "Min Setpoints Differential" screen is displayed.

17-3

Service Settings   1/3
Test Operation
Maintenance Contact
Field Settings
Min Setpoints Differential
External Input Interlock
Group Address
Return   Setting

Press the Menu/Enter button.

17-4 Select "None", "Single Sp" or "0°C" – "8°C" by using the ▲▼ (Up/Down) buttons.

17-5 Press the Menu/Enter button. The confirmation screen is displayed.

17-4
17-5

Min Setpoints Differential
Min Setpoints Differential

Single Sp
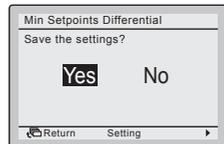

Return   Setting

Press the Menu/Enter button.

17-6 Select Yes and press the Menu/Enter button. The settings are confirmed and the Service Settings menu returns.

17-6

Min Setpoints Differential
Save the settings?

Yes   No

Return   Setting

Press the Menu/Enter button.

<Service Settings>

17-7 Press the Cancel button once. The remote controller restarts and the Basic screen returns.

17-8 Disable the Menu/Enter and Cancel button when no other settings need to be changed. To disable, refer to "4-2 Enable/disable the Menu/Enter and Cancel button" on page 12.

NOTE

● In Single setpoint mode both cooling and heating setpoints are the same. Changing one setpoint automatically changes the other setpoint.
● In Dual setpoint mode there is always a limitation for the heating and cooling setpoint:
  - Cooling setpoint ≥ heating setpoint + minimum setpoints differential.
    When the cooling setpoint is lowered below the heating setpoint + minimum setpoints differential, the heating setpoint is automatically lowered.
  - Heating setpoint ≤ cooling setpoint – minimum setpoints differential.
    When the heating setpoint is increased above the cooling setpoint – minimum setpoints differential, the cooling setpoint is automatically increased.

---

18. Other Service Settings

18-1 Group Address

● Assign the group address and unit number for centralized control.
● The group and unit address can only be set when a centralized controller is connected. This menu is only visible when a centralized controller is connected.
● The group and unit address can be "set" and "released".

NOTE

Don't forget to release the group address before disconnecting the centralized controller because the menu will not be accesible afterwards.

18-2 Indoor and outdoor unit Airnet Address

● Set the indoor and outdoor unit Airnet Address.

18-3 Indoor Unit Status

● Consult the indoor unit thermistor temperatures.

	SkyAir	**VRV**
Th1	Suction air thermistor	Suction air thermistor
Th2	Heat exchanger thermistor	Heat exchanger liquid pipe thermistor
Th3	-	Heat exchanger gas pipethermistor
Th4	Discharge air thermistor	Discharge air thermistor
Th5	-	-
Th6	-	-

18-4 Outdoor Unit Status

● Consult the outdoor unit thermistor temperatures.

	SkyAir	VRV
Th1	Outdoor air thermistor	-
Th2	Heat exchanger thermistor	-
Th3	Discharge pipe thermistor	-
Th4	-	-
Th5	-	-
Th6	-	-

18-5 Forced Fan ON

● Force the fan(s) ON for the individual indoor units.
● This function can be used to check which indoor unit number is associated with which indoor unit.

18-6 Switch Main Sub Controller

● Swap the main and sub remote controller designation.

NOTE

● Changing the main/sub designation requires to turn the power OFF and ON again.

18-7 Filter Indicator

● Resets the timer of the filter indicator for all indoor units.

18-8 Test Filter Auto Clean

● Test if filter auto clean works.
● This function is only available if the Self Cleaning Decoration Panel is installed.
● When Filter Auto Clean is disabled (Disable Filter Auto Clean), the message "Auto filter clean is disabled" will be shown when opening the Test Filter Auto Clean screen.

18-9 Brush/Filter Ind

● Resets the timer of the filter indicator for all indoor units.
● This function is only available if the Self Cleaning Decoration Panel is installed.

## 18-10 Disable Filter Auto Clean

● Enable/disable the use of the Filter Auto Clean function.
● When disabled, the message "Auto filter clean is disabled" will be shown when opening the Test Filter Auto Clean and Filter Auto Clean screen.
● This function is only available if the Self Cleaning Decoration Panel is installed.

19. Software update with Updater

● The BRC2E52C7/BRC3E52C7 software includes by default language pack 1.
● Other language packages can be installed with the "PC USB cable" option (EKPCCAB3) + updater software.
● Prerequisites:
   - Updater software: please contact your local dealer for the correct version.
   - "PC USB cable" EKPCCAB3 or higher: includes wire harness and cables 4P344073-1- and 4PW64322-1A (both are needed during the installation).

Installation instructions:
   1. Make sure that the indoor unit is powered off.
   2. Connect the cables.
      See the figure below for how to connect the cables.
   3. Power on the indoor unit.
   4. Start the updater on the PC.
   5. Proceed to the "Update Procedure Selection" window. The remote controller software is automatically detected.
   6. Fill in the model name "BRC" in the filter box and select the desired language pack.
   7. Follow the onscreen instructions (additionally, during installation, cable 4P344073-1 is needed).
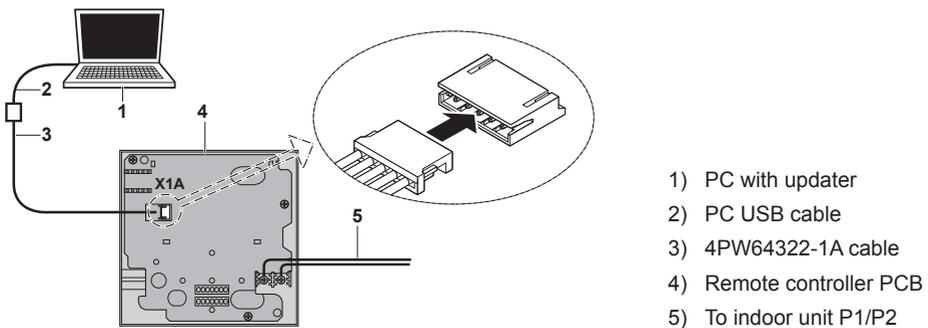

1) PC with updater
2) PC USB cable
3) 4PW64322-1A cable
4) Remote controller PCB
5) To indoor unit P1/P2

More information about the available languages can be found in "12. Language" on page 27.
