

4-Way Blow Ceiling Suspended Cassette

Seasonal Inverter FUQ-B / RZQ-D(B9W1)

FUO71B

Height	770mm
Width	900mm
Depth	320mm

See tables overleaf for full list of dimensions

The unique ceiling suspended cassettes are the ideal solution for rooms without false ceilings. An excellent solution for larger areas with high occupancy and ceiling heights up to 3.5m.

- RZQ Seasonal Inverter technology: first light commercial range in the market optimised for Seasonal Efficiency. Takes account of multiple cooling/heating temperatures as well as unit operation at partial load instead of just full capacity. Will also consider the power consumed by equipment in auxiliary mode (thermostat off, standby mode, OFF mode).
- Application flexibility: Comms, computer and server room cooling possible. Also suitable for use in R-22 replacement projects.
- Wired remote controller: provides a 7-day schedule timer, enabling the user to program the air conditioning daily or weekly, with up to 5 different actions per day possible (BRC1D52 standard / BRC1E51A optional).
- BRC1E51A New optional wired controller: allows easy navigation through menu items, via a personalised display and minimal number of buttons.
- Home Leave operation: automatically keeps the room temperature at a specified comfort level during extended absence by switching to heating when it reaches the minimum level and to cooling at the maximum level.
- Air flow flexibility: air can be discharged in any of 4 directions. Possibility to shut off 1 or 2 flaps enabling the unit to be also installed in a corner or in a small room.
- Comfortable air distribution: vertical auto swing of the flaps and the 5 different air flow patterns available ensure the best distribution of the air throughout the whole room.
- Air purification filter: removes airborne dust particles to ensure a steady supply of clean air.
- Self diagnosis digital display: in the unlikely event that an abnormality occurs, the LCD remote controller displays the error code allowing prompt maintenance.
- Auto-restart function: after a power failure in the building, the system automatically restarts to the setting in operation before the power failure.
