#### Notes

- (1) In case of connection with a 20~50 type indoor unit, match to the size of the field pipe using the attached pipe. Connection between the attached pipe and the field pipe must be brazed.
- (2) Voltage range: units are suitable for use on electrical systems where voltage supplied to unit terminal is not below or above listed range limits.
- (3) Maximum allowable voltage range variation between phases is 2%.
- (4) MCA/MFA: MCA = 1.25 x FLA
- (5) MFA  $\leq$  4 x FLA
- (6) Next lower standard fuse rating minimum 15A
- (7) Select wire size based on the value of MCA
- (8) Instead of a fuse, use a circuit breaker
- (9) In case of connecting with indoor unit capacity index between 150 and 160, match to the size of the field pipe using the attached pipe. Connection between the attached pipe and the field pipe must be brazed.
- (10) In case of connecting with a 200 type indoor unit or capacity index more than 160 and less than 200, match to the size of the field pipe using the attached pipe. Connection between the attached pipe and the field pipe must be brazed.
